

Codemon Series – Rules & Regulations

CSES | NIT Warangal

Introduction

Codemon is a series of **6–7 programming contests** across the academic year testing algorithms, problem-solving, speed, and accuracy.

Open to all NIT Warangal students. Points build a season leaderboard. **Top 15 reach** the Grand Finale.

1. Eligibility

- **Open to all:** Registered UG and PG students of NIT Warangal.
- **Individual Participation:** Strictly solo. No teams or collaboration.

2. Contest Format

Parameter	Specification
Total Contests	7–8 rounds per year (every 3–4 weeks)
Platform	Codeforces/Hackerank
Default Mode	Offline in designated labs
Duration	90 to 150 minutes
Difficulty Profile	Beginner friendly

Simulates placement OT formats.

3. Leaderboard & Scoring System

Please note: a participant must score a non-zero contest score to be eligible for streaks and certain leaderboard considerations; otherwise they receive 0 points for that contest.

3.1 Base Points (By Rank)

Awarded to top 30 participants per contest:

Rank Range	Base Points Awarded
1st Place	30 Points
2nd Place	29 Points
3rd Place	28 Points
... Down to 30th	-1 point per position
30th Place	1 Point
Beyond 30th or Zero Score	0 Points

3.2 First-AC Bonus

- **+2 bonus points** per problem for the **First Accepted Submission (First AC)**.

3.3 Streak Factor (Consistency Reward)

Multipliers for consecutive non-zero scoring contests:

Consecutive Non-Zero Contests	Multiplier Applied	Effective Extra Points
2 Contests	× 1.05	+5% bonus
3 Contests	× 1.10	+10% bonus
4+ Contests (Capped)	× 1.15	+15% bonus

A streak breaks when a participant scores 0 points in a contest (i.e., places beyond 30th (with no first AC) or does not get any AC).

3.4 Order of Score Calculation

Calculation steps per round:

- 1. **Base Points:** From rank position.
- 2. **First-AC Bonus:** Add +2 per First AC.
- 3. **Streak Multiplier:** Multiply sum by streak factor.
- 4. **Leaderboard:** Add final round score to total.

Worked Examples

Contest	Rank	Base Pts	First-AC Bonus	Pre-Streak Total	Active Streak	Multiplier	Final Contest Points
Contest 1	5th	26	0	26	1 Round	× 1.00	26.00
Contest 2	8th	23	+2 (1 prob)	25	2 Rounds	× 1.05	26.25
Contest 3	10th	21	0	21	3 Rounds	× 1.10	23.10
Contest 4	>30th	0	0	0	Broken	N/A	0.00

3.5 Cumulative Leaderboard

- A participant's season score is the sum of their final contest scores from all contests.
- The leaderboard will be published after each contest with updated season scores.

3.6 Tiebreaker Rules

Tiebreaker order for equal cumulative points:

- 1. **Most Wins:** 1st-place finishes.
- 2. **Longest Streak:** Max consecutive active rounds.
- 3. **Best Single Rank:** Highest individual contest rank.
- 4. **Earliest Achievement:** First to reach qualifying result.

4. Finals Qualification & Format

- **Top 15:** Season leaderboard leaders qualify for the Grand Finale.
- **Wildcards:** Up to 2 discretionary slots for outstanding single-round performances.
- **Format:** Offline event with higher difficulty.
- **Rules:** Finale rules released before the event.

5. Rewards & Recognition

- **Per-Contest:** Top 10 get goodies, stickers, and badges.
- **Season:** Top overall finishers receive prizes and certificates.
- **Champion:** Winner of the Finals receives special prize(s) and official recognition.

6. Rules of Conduct & Integrity

Cheating or dishonesty results in immediate disqualification.

Permitted Actions

- Participants may ask doubts related to syntax or simple algorithm clarifications during the contest.

Prohibited Actions

- **Plagiarism:** Copying code from participants or online sources.
- **Code Sharing:** Distributing solutions during live contests.
- **Account Sharing:** Using alt or shared handles.
- **AI Tools:** Using ChatGPT, Copilot, Claude, or code generators.

7. Post-Contest Activities

A **30–45 minute group learning session** follows each round:

- **Format:** Groups of 5–6 participants led by student mentors.
 - **Focus:** Walk-throughs, optimization tips, and conceptual recaps.

Starter C++ Code Template

Standard C++ boilerplate for multiple test cases:

```
C/C++
#include <bits/stdc++.h>
using namespace std;
using ll = long long;

void solve() {
    // Your solution here
}

int main() {
    ios_base::sync_with_stdio(false);
    cin.tie(NULL);
    int t = 1;
    cin >> t; //comment it for single testcase problem
    while (t--) solve();
}
```
